

Paired evidence across new tables — h2-small-reuse64

Warm input work for each table

Harmful, beneficial and shared outcomes

Each table shows both balanced repetitions: pair 1 on the left, pair 2 on the right. Queries within a table are dependent. The warm-work panel isolates subsequent queries; first-use requests and complete costs remain in the study. Positive token differences indicate more work for slicing. Correctness classes retain every offered task. The study is ineligible.
