

Paired evidence across new tables — h3-large-reuse24

Both correct Slice only: benefit from slicing
Full only: harm from slicing Both wrong

Warm input work for each table

Harmful, beneficial and shared outcomes

Each table shows both balanced repetitions: pair 1 on the left, pair 2 on the right. Queries within a table are dependent. The warm-work panel isolates subsequent queries; first-use requests and complete costs remain in the study. Positive token differences indicate more work for slicing. Correctness classes retain every offered task. The study is ineligible.
